SUBJECT INDEX

Acid-base status of soils as affected by nitrogen, 387
Acidoids, soil—
  dissociation constants, 366
  titration curves, 364
Actinomyces—
  in rhizosphere, 212
  soil, number, 96, 319, 325
Albite, potash fixation by, 266
Alfalfa—
  chemical composition, 431
  response to fertilizer treatments, 146
Algae in rhizosphere, 212
Alkaline earth metals and humus, 168
Allantoin in soils, 177
Aluminum—
  active, in soil, 25
  effect on potash fixation, 267, 271
  humates, 170
  importance for higher plants, 189
Amaranth, chemical composition, 431
Ammonia—
  reaction between soils and, 477
  replacement by other hydroxides, 479
Ammonification as an index of decomposition, 435
Ammonium—
  acetate, cations released by, treatment, 303
  sulfate, effect on base status of soil, 391
Artichoke, Jerusalem, chemical composition, 431
Azotobacter—
  activity in soil, 323
  identification, 185
  in Iowa soils, 455
  lime effect on, 465
Bacteria—
  cellulose-decomposing, number in soil, 320, 324
  in rhizosphere, 210
  phytomonas, identification, 185
  root nodule, composition, 111
  soil, number, 96, 319, 324
Barium silicates, preparation, composition, and behavior, 293
Barley, silicon in, growth, 191
Basalt, fixation of potash by, 265
Base-exchange—
  capacity of—
    chernozem and podzol soils, 348
    organic portion of soils, 483
  compounds, relation to salt treatment, 277
  effect of hydrogen peroxide treatment on, 488
Bases, exchangeable—
  age of soil in relation to, 91
  in bentonite, 281
  release by electrodialysis, 303
Bentonite—
  equilibrium constants of mixed sodium- and potassium-, 289
  exchangeable cations in, 281
  potash fixation by, 265
Bidens, chemical composition, 431
Bluegrass—
  Canada, chemical composition, 431
  Kentucky, chemical composition, 431
Books, *see* Book reviews at end of letter B
Buckwheat—
  chemical composition, 431
  chlorine in, growth, 195
Buttercup, chemical composition, 431

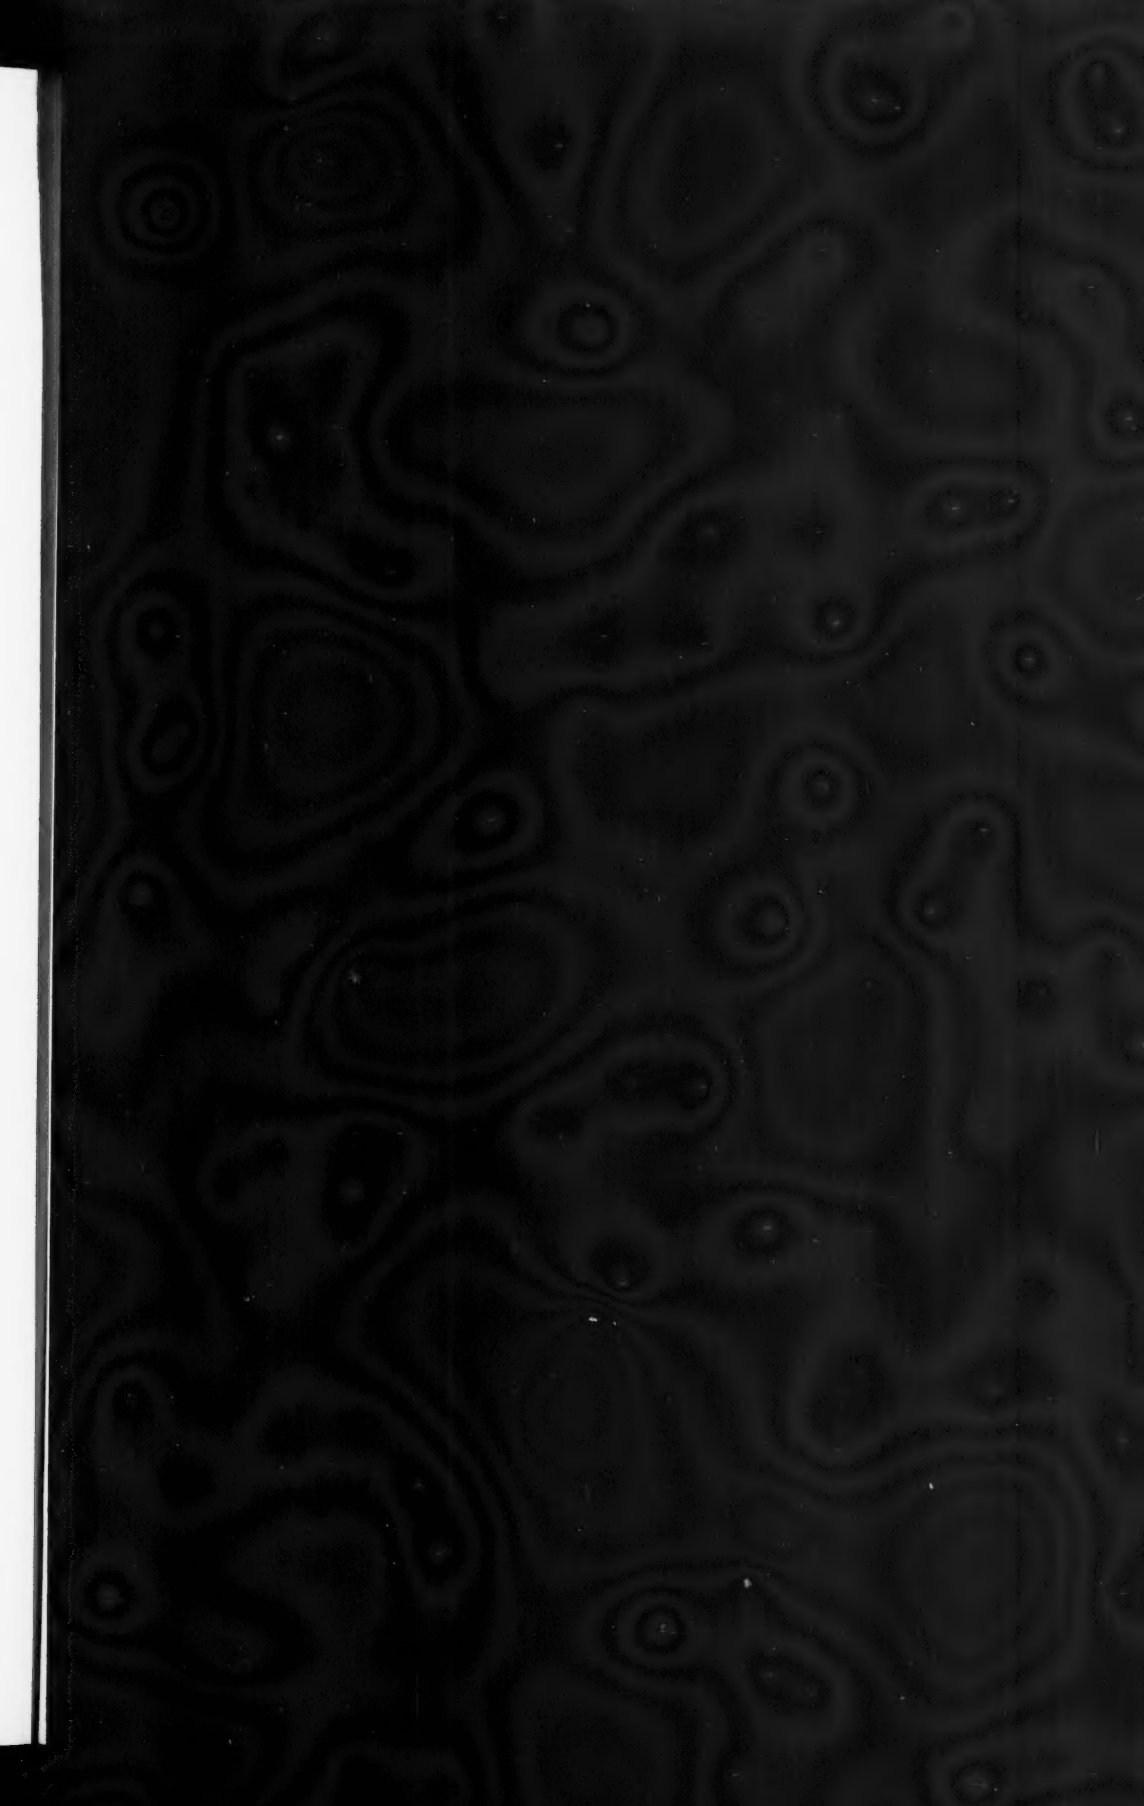
Cabbage, chemical composition, 431
Calcium—
  content of corn plants in relation to other elements, 425
  fixation in soil, 469
  in oat leaves, 450
  release by electrodialysis, 303
Calcium—(*continued*)
  silicates, preparation, composition, and behavior, 293
  water-soluble, in soil, 470
Canada bluegrass, chemical composition, 431
Carbohydrates, carbon content, 67
Carbon—
  behavior in soil, 155
  content of—
    a series of plants, 431
    chernozem and podzols, 349
  dioxide—
    and nitrate nitrogen in soils, relation, 144
    daily production in soil, 326
    evolution from fallow and cropped soils, 98
  method of determining in carbohydrates and proteins, 67
  nitrogen—
    ratios in soils, 151
    relationships in soils, 157, 380
  organic, determination, 490
Carex—
  lupulinus, chemical composition, 431
  stricta, chemical composition, 431
Cataphoresis study of silicates, 296
Cations—
  electrodialysis speed of various, 309
  exchange capacity of chernozems and podzols, 348
  exchangeable, relation to—
    age of soil, 91
    aluminum in soil, 25
    saline soils, 84
    salt treatment, 277
  release by electrodialysis, 303
Cellulose—
  decomposing organisms in soils, 320
  decomposition and lignin, 199
  lignin preparations, 205
Chernozem—
  carbon in gels of, 349
  exchange capacity, 348
  nitrogen in gels of, 349
  phosphorus in gels of, 349
  silica-sesquioxide ratio in colloids of, 348
Chlorine, importance for higher plants, 189
Clay—
  acidoids, reaction with sodium hydroxide, 361

Clay—(*continued*)
Randall—
color, 369
organic matter in, 374
Clover—
decomposition, 13
red, chemical composition, 431
sweet, chemical composition, 431
Club moss, chemical composition, 431
Colloids—
composition and structure of soil, 353
electrodialyzed, composition, 302
electronegative gels of, 346
fixation of potash by treating, with sodium carbonate, 269
in soil of podzol profile, 345
isoelectric gels of, 346
optical methods in the study of, 352
organo-mineral gels of the soil, 343
silica-sesquioxide ratio of soil, 348
soil, discussion, 343
surface area of soil, measurements, 57
Conductivity in single-base soils, 312
Corn—
nutrition studies with, 403
stover, chemical composition, 431
Cottonseed—
hulls, chemical composition, 431
meal, effect on base status of soil, 391
Crop—
legume and nonlegume, influence on soil nitrogen, 9
residual effect of, 10
Culture solutions, ionic concentration and elements in plant tissues, 403
Electrodialysis—
cations released by, 303
studies in, 309
Fern, chemical composition, 431
Fertilizers—
ammonium sulfate, 153
crop reaction to, 447
effect on soil nutrients, 467
manure as, 153
nitrogen, relation to humus content and productivity of soil, 143
response of crops to, 146
sodium nitrate, 153
straw and minerals as, 153
Fungi—
chemical composition, 431
in rhizosphere, 214
Fungi—(*continued*)
lignin and cellulose decomposition by, 202
number in soil, 320, 325
Galls, Heterodera, on cowpea roots and nematodes, 133
Gels—
electronegative, of colloids, 346
isoelectric, of colloids, 346
German millet, chemical composition, 431
Gladiolus, chemical composition, 431
Glucose, carbon content of, 69
Granite, potash fixation by, 265, 269
Haircap moss, chemical composition, 431
Heat—
evolution in soil, 252, 255
of wetting, 260
Holland, saline soils of, reclamation, 83
Horsetail, chemical composition, 431
Humates—
formation, 165
solubility, 174
Humic acid—
formation, 165
solubility, 174
Humus—
behavior in soil, 155
content in relation to organic residues and fertilizer, 143
effect of different soil treatments on, 150
studies in, 165
Hydrochloric acid, effect on potash fixation, 268
Hydrogen-ion concentration of soils and ammonia adsorption, 480
Hydrogen peroxide method of oxidizing organic matter, 486
Invertebrates in rhizosphere, 216
Iron—
humates, 170
relation to soil color, 377
Isoelectric gels of colloids, 346
Jerusalem artichoke, chemical composition, 431
Juncus effusus, chemical composition, 431
Kaolinite, fixation of potash by, 265
Kentucky bluegrass, chemical composition, 431
Knotweed, chemical composition, 431
Kwelder, definition, 84
Lamb's-quarters, chemical composition, 431
Legumes, effect on available nitrogen, 8

Lignin—
cellulose preparations, 205
content of—
a series of plants, 431
certain soils, 380
decomposition, 199
Lime—
effect on—
Azotobacter, 465
plant growth, 434
monocotyledons and dicotyledons, content, 442
Lysimeter studies, 387
Magnesium—
content of corn plants, relation to other elements, 425
release by electrodialysis, 303
silicates, preparation, composition, and behavior, 293
Maize, aluminum in, growth, 192
Manganese—
effect on oxidation of organic matter, 493
relation to soil color, 377
Manure—
fertilizer value, 153
green, efficiency of legumes as, 11
influence on soil microbes, 95
Mica schist, fixation of potash by, 265
Microbiological soil activities, 95, 315
Microörganisms—
decomposition of spruce wood by, 203
influence of plants on, 207
localization around roots, 218
number in soil, 327
specific groups of, activity in soils, 315
Millet, German, chemical composition, 431
Mud, saline, deposits, reclamation, 84
Muscovite, fixation of potash by, 265
Nematode, root-knot, reduction in soil, 127
Nitrates—
accumulation in fallow and cropped soils, 100
carbon dioxide evolution and, 144
Nitrification, an index of decomposition, 435
Nitrogen—
available in soil, 8
behavior in soil, 152
carbon relationships, 157
changes in the decomposition of rye and clover, 13
content of—
a series of plants, 431
Nitrogen—(*continued*)
content of—(*continued*)
chernozem and podzol soils, 349
corn in relation to other elements, 425
root nodule bacteria, 112
effect on soil reaction, 394
fertilizers, humus, and soil productivity, 143
fixation—
as influenced by fallowing and cropping, 104
by Azotobacter, 459
fractions in portions of the soybean plant, 114
influence on acid-base status of soils, 387
Oat—
leaves, potassium in, 450
straw, chemical composition, 431
Onion, chemical composition, 431
Orchard grass, chemical composition, 431
Organic—
base-exchange capacity of, soils, 483
carbon as determined by the chromic acid method, 490
detritus, localization of microbes around, 216
matter—
color of soils affected by, 369
decomposition, effect on nematodes, 127
effect on soil nutrients, 467
exchange capacity, 483
nature of, in Randall clay and upland soil, 374
relation to soil texture, 371
residues in relation to soil productivity, 143
Orthoclase, potash fixation by, 266
Pea, chlorine in, growth, 197
Pentosan content of a series of plants, 431
Pepper, chemical composition, 431
Permutites, electrodialysis, 311
Phosphates, calcium, effect on potash fixation, 271
Phosphoric acid, effect on potash fixation, 271
Phosphorus—
changes in decomposition of rye and clover, 13
content of—
chernozem and podzol soils, 349
corn plants in relation to other elements, 425

Phosphorus—(*continued*)
extraction with weak acids, 452
mobilization in composts, 20
organic, method of determining, 29
Phytomonas, identification, 185
Plant—
analyses in testing soil fertility, 447
growth, effect of plant tissue decomposition on, 427
nutrients, antagonism, 447
Plants—
aluminum for, 189
chemical composition of—
alfalfa, amaranth, Bidens, buckwheat, buttercup, cabbage, Canada bluegrass, *Carex lupulinus*, *Carex stricta*, club moss, corn stover, cottonseed hulls, fern, fungi, German millet, gladiolus, haircap moss, horsetail, Jerusalem artichoke, *Juncus effusus*, Kentucky bluegrass, knotweed, lamb's-quarters, oat straw, onion, orchard grass, pepper, potato top, pursley, ragweed, red clover, redtop, rye straw, seaweed, smartweed, sorghum, Sudan grass, sweet clover, timothy, tobacco, tomato, turnip top, witch grass, xanthium, 431
chlorine for, 189
influence on soil microörganisms, 207
monocotyledons and dicotyledons, silica and lime in, 442
removal of potassium from, 472
silicon for, 189
tissues of, effect of decomposition on growth, 427
Podzols—
carbon in gels of, 349
exchange capacity, 348
nitrogen in gels of, 349
phosphorus in gels of, 349
silica-sesquioxide ratio of colloids of, 348
Polder, definition, 84
Potash—
content of corn plants in relation to other elements, 425
fixation in soils, 263, 468
in oat leaves, 450
Potato top, chemical composition, 431
Protein, carbon content of, 67
Protozoa in rhizosphere, 215
Pursley, chemical composition, 431
Pyrophyllite, potash fixation by, 267
Ragweed, chemical composition, 431
Red clover, chemical composition, 431
Redtop, chemical composition, 431
Rhizobium, identification, 185
Rhizosphere, microscopic examination, 207
Root-knot nematode in soils, 127
Root nodules, composition, 120, 124
Roots—
composition of, as compared with other organs, 449
localization of microörganisms around, 218
Rye—
decomposition, 13
straw, chemical composition, 431
Seaweed, chemical composition, 431
Sericite, potash fixation by, 265
Silica—
monocotyledons and dicotyledons, content, 442
potash fixation by, 267, 271
sesquioxide ratio in chernozem and podzol colloids, 348
solubility of chernozems and podzols, 349
Silicates—
barium, 293
calcium, 293
magnesium, 293
strontium, 293
Silicon, importance for higher plants, 189
Smartweed, chemical composition, 431
Sodium—
carbonate, effect on potash fixation, 268
nitrate, effect on base status of soil, 391
Soil—
absorbing complex, cations in, 25, 92
acidoids, titration curves, 364
aluminum, active, in, 25
colloids, *see* Colloids
decomposition of plant tissues in, 427
depths, available nitrogen at various, 8
exchangeable cations in, relation to active aluminum, 25
fallow, influence on soil microbes, 96, 210
fertility—
crop influence, 3
relation to organo-mineral gels, 343
season influence, 3
testing, by the triple analysis method, 447
forming process in saline muds, 84


Soil—(*continued*)
microbiological activities, *see* Actinomyces, Bacteria, Fungi, Microörganisms
minerals, potash fixation by, 264
moisture, relation to wilting point, 47
mud deposits, conversion into, 84
plot experiments, 146
population, reduction during organic matter decomposition, 127
profile, sterility of soil in, 473
properties as influenced by absorbing complex, 25
reaction as affected by nitrogen source, 394
series, analyses, description, or experiments with—
Aiken, 467; Barnes, 61; Caribou, 178; Cecil, 61; Chehalis, 468; Chico, 269, 272; Clinton, 456; Enfield, 393; Fallon, 293; Glade, 178; Grundy, 456; Hagerstown, 272; Marshall, 293; Melbourne, 317, 321; Merrimac, 388; Meyer, 467; Miami, 272; Norfolk, 178; Olympic, 471; Palouse, 143, 317, 321, 370; Parsons, 269, 272; Putnam, 294; Randall, 369; Sharkey, 293; Summit, 269, 272; Wethersfield, 388
temperature, 256
texture, relation to nitrogen and organic matter, 371
thermal phenomena in a, 251
titration, with bases, 360
Soils—
age in relation to exchangeable bases, 91
allantoin in, 177
ammonium, and the pH, 481
calcium clay, from magnesium-sodium soils, 88
conductivity of single-base, 312
electrodialysis, *see* Electrodialysis
Hawaiian, 251
Holland, 83
Iowa, Azotobacter in, 455
kwelder, 83
lysimeter studies of, 387
nutrients in, as affected by organic matter and fertilizer, 467
organic base-exchange capacity, 483
organic phosphorus in, 29
Palestine, some properties of, 25
potash fixation in, 263
reaction between, and ammonia, 477
Soils—(*continued*)
saline, reclamation, 83
solonchak, *see* Solonchak
southern high plains, some properties of, 369
sulfates, method of determining, 41
surface area measurements, 57
titration curves, 364
upland, nature of organic matter in, 374
wilting point, 47
Zuyder Zee, reclamation, 87
Solonchak, reclamation, 83
Sorghum, chemical composition, 431
Soybean nodules, composition, 111
Statistical interpretation of culture solution experiments, 403
Straw and fertilizers, 153
Strontium, preparation, composition, and behavior, 293
Sudan grass, chemical composition, 431
Sulfates, method of determining in soils, 41
Sulfur content of corn plants in relation to other elements, 425
Sunflower—
aluminum in, growth, 193
silicon in, growth, 189
Sweet clover, chemical composition, 431
Tamm's reagent, solubility in, of silicic acid and sesquioxides of chernozem and podzol soils, 349
Temperature, Van der Waals low, adsorption isotherm, 57
Timothy, chemical composition, 431
Tobacco—
chemical composition, 431
effect of nitrogen fertilizers on, soils, 392
Tomato, chemical composition, 69, 431
Turnip top, chemical composition, 431
Urea, effect on—
base status of soils, 391
solubility of bases, 472
Water, irrigation—
influence on soil microbes, 95
sulfates in, 41
Weather, Benares, India, 4
Wheat, response to different treatments, 146
Wilting point, method of determining, 47
Witch grass, chemical composition, 431
Xanthium, chemical composition, 431
Zeolite, potash fixation by, 265
Zuyder Zee soils, reclamation, 87
